

Shubham More

B.Tech Information Technology | Full-Stack Developer | AI Enthusiast

shubhamvmore11@gmail.com • India • [linkedin.com/in/shubham-more-50a2a7428](#) • [github.com/shubhammore5145](#)

PROFESSIONAL SUMMARY

Motivated B.Tech IT student at MGM University with hands-on experience building full-stack web applications, IoT systems, and AI-powered platforms. Finalist at Smart India Hackathon with 10+ deployed projects spanning healthcare, agriculture, finance, and hospitality domains. Adept at Java, Python, and JavaScript ecosystems; passionate about crafting scalable, user-centric solutions that create measurable real-world impact.

EDUCATION

B.Tech — Information Technology

MGM University, Aurangabad

2022 – Present

Relevant Coursework: Data Structures & Algorithms, OOP, Database Management Systems, Computer Networks, IoT Systems, Software Engineering

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, PHP	Frontend: HTML5, CSS3, React.js, Responsive Design
Backend: Node.js, Express.js, PHP, REST API Development	Databases: MySQL, Firebase Firestore, MongoDB
IoT & Hardware: ESP32, Arduino, GPIO Control, Sensor Integration	AI / ML: OpenAI API, Prompt Engineering, LLM Integration
Tools: Git, GitHub, VS Code, Postman, Vercel, Netlify, XAMPP	Core Concepts: OOP, DSA, System Design, Real-Time Systems, Cloud Sync

FEATURED PROJECT

Smart Ambulance Traffic Management System

IoT / Hardware / Web • ESP32 • Firebase • JavaScript • Google Maps API

Engineered an end-to-end real-time IoT solution to eliminate ambulance delays at traffic intersections — a problem responsible for preventable loss of life in urban India.

- Deployed ESP32 microcontrollers at intersections for automated traffic-light preemption triggered by ambulance proximity.
- Integrated GPS-based real-time ambulance tracking synced to a Firebase cloud database for sub-second signal coordination.
- Built a live web dashboard for municipal traffic control centres with route visualisation via Google Maps API.
- Designed the system to be fully autonomous — zero manual dispatcher intervention required during operation.
- Architecture supports multi-intersection chaining to clear corridor routes city-wide.

KEY PROJECTS

Agro Nova

React • Node.js • Express • MongoDB • Weather API

- Developed a full-stack web platform helping farmers with crop management, real-time weather forecasting, and live market price tracking.
- Built an intelligent crop recommendation engine using environmental parameters (soil type, rainfall, temperature) to optimise yield.
- Implemented RESTful APIs for weather data aggregation and MongoDB schemas for scalable farm-profile management.

AI Career Trackr

React • Python • OpenAI API • Firebase

- Created an AI-powered career guidance platform that analyses user skill sets and generates personalised career roadmaps.
- Integrated resume parsing and automated skill-gap analysis to surface targeted learning recommendations.
- Leveraged OpenAI API for dynamic, context-aware career coaching conversations within the platform.

Mess Management System

Java · Swing · MySQL · JDBC

- Architected a robust desktop application to digitise hostel mess operations — replacing error-prone manual registers.
- Automated monthly student billing, daily attendance tracking, and low-stock inventory alerts with email notifications.
- Designed a normalised MySQL schema supporting 500+ student records with JDBC connection pooling for performance.

Personal Finance Manager

Python · Pandas · Matplotlib · Tkinter

- Built a local finance tool for tracking daily expenses, categorising spending, and visualising trends with interactive charts.
- Added CSV import/export for easy data migration and a budgeting alert system to flag overspending by category.

Cafe Digital Presence & Booking

HTML5 · CSS3 · JavaScript · Razorpay

- Designed and deployed a responsive website for a local café with digital menus, gallery, and online table reservation.
- Integrated Razorpay Payment Gateway for secure, real-time online payment processing.

ACHIEVEMENTS & CERTIFICATIONS

Smart India Hackathon Finalist — Reached the national final of India's premier hardware/software hackathon — demonstrating ability to ideate, build, and pitch under intense time pressure.

10+ Real-World Applications — Independently architected, built, and deployed projects across IoT, AI, agriculture, healthcare, and fintech domains — all beyond academic requirements.

5+ Professional Certifications — Completed industry-recognised courses in modern web technologies, cloud platforms, and AI/ML fundamentals.

Open Source Contributor — Active participant in developer communities, collaborative coding challenges, and open-source repositories on GitHub.
